A Little bit about me

What I am apart of

Across regional Queensland we are feeling the impacts of Climate Change. Hotter days, extreme flood events, fires, coastal flooding and erosion and more severe cyclones. We are seeing the reef bleach more often than ever before, our rainforests are drying out and burning, droughts are affecting our farms and agriculture. It is really tough. Regional Queensland is doing it tough and we need our government to act.

According to a new report recently published, "*Queensland Climate Action Plan: Laying the foundation for a successful climate transformation*"^{*1}, we now have the least ambitious emissions reduction plan in the country. The research is showing that with our current emissions reduction plan, we won't meet the requirements of the Paris Agreement and limit global temperature rise to 1.5 degrees. Our current plan means we blow out by almost triple the emissions budget available to limit the temperature rise to 1.5 degrees. That's not good enough. We are here to support a government that will set ambitious goals for the big issues we face.

Premier, I am writing to you to let you know that Queenslanders across the State support strong climate action. We are urging you to take action as recommended by the above mentioned report and help Queensland reduce emissions to 50% below 2020 levels. This is an issue that all Queenslanders care about.

Thank you,
